RE: 2017 - 2018 Seasonal Influenza Vaccine Pre-Book Information

DATE: January 10, 2017

For the 2017 - 2018 influenza season, all Vaccines for Children (VFC) and state-supplied influenza vaccine pre-booking will again be done online. The online survey can be found on the North Dakota Department of Health (NDDoH) website at www.ndhealth.gov/immunize/. Please complete the online influenza survey by **Friday, January 27, 2017**. It is very important that pre-book orders are received prior to this date, as the NDDoH has to pre-book influenza vaccine with the federal government. Once the survey is submitted, the provider's influenza vaccine pre-book has been placed with NDDoH. As usual, NDDoH asks all providers to print a copy of their submitted influenza vaccine pre-book to have on hand. The last page of the pre-booking survey will prompt providers to do this. Having a copy of your clinic's influenza vaccine pre-book will be helpful when vaccine begins to ship in early fall 2017. Influenza vaccine may not be provided to clinics who do not pre-book influenza vaccine.

A pre-populated provider influenza profile will be sent to all providers. The "Provider Estimates" have been completed for you based on North Dakota Immunization Information System (NDIIS) data for the 2016-2017 influenza season. This information is being sent to providers to assist with the pre-booking process.

NDDoH highly recommends that providers pre-book more than one brand and presentation (i.e., vials and syringes), in case of influenza vaccine supply issues. By pre-booking only one brand or presentation, providers may not receive influenza vaccine until later in the influenza season, or not at all, if their particular brand or presentation is involved in a vaccine delay, shortage, or recall. Also, often in influenza seasons, certain brands or presentations are released through the allocation system sooner, so providers may receive doses earlier for this reason also. VFC and other state/federal influenza vaccine will be shipped from McKesson in multiple shipments to providers for the 2017 - 2018 influenza season.

NDDoH-supplied influenza vaccine may be used for **VFC-eligible children (Medicaid-eligible, American Indian or Alaskan Native, uninsured or underinsured) only**. It will be allocated to providers based on pre-book orders, previous influenza vaccine orders, doses administered entered into the NDIIS from the 2016 - 2017 influenza season, and your clinic's size. Providers are not guaranteed to receive all of the vaccine they pre-book.

The NDDoH supplies influenza vaccine to Prevention Partnership Providers for all VFC-eligible children ages 6 months – 18 years. **It is your clinic's responsibility to order private influenza vaccine for insured**

children to ensure all children in your clinic are vaccinated. VFC influenza vaccine must not be administered to privately insured children or adults older than 18.

The 2017 – 2018 influenza season will again offer trivalent and quadrivalent influenza vaccines, however NDDoH will only be pre-booking quadrivalent influenza vaccines for this influenza season. Quadrivalent influenza vaccine will protect against two A strains and two B strains. The trivalent vaccine protects against two A's and one B strain. NDDoH will do its best to fill pre-booked orders with the brand and presentation pre-booked, but providers must understand that it is not guaranteed and orders may be filled with what is available.

Some suggestions for determining the amount of vaccine to pre-book:

- Children, 8 years of age and younger, who are receiving influenza vaccine for the first time, will need to receive **two** doses. When giving IIV3 (trivalent inactivated vaccine), IIV4 (quadrivalent inactivated vaccine), or LAIV4 (quadrivalent live attenuated influenza vaccine), the doses should be given at least four weeks apart.
- Use the North Dakota Immunization Information System (NDIIS) to determine the amount of influenza vaccine administered last year. When running a doses administered report in the NDIIS, use "ALL VFC TYPES" for VFC TYPE and "STATE-SUPPLIED" for VACCINE TYPE. Do not select "All Clients."
- Consider the Advisory Committee on Immunization Practices (ACIP) recommendations for vaccination of all children 6 months – 18 years. www.cdc.gov/vaccines/hcp/acip-recs/index.html
