WELL, DUDLEY, OL' BUDDY, THERE'S OUR TEMPORARY EROSION CONTROL. THAT SHEET PILING WILL CATCH ALL THE SOIL THAT WASHES OFF THE SLOPES, AND THEN WE'LL PACK IT BACK UP HERE.

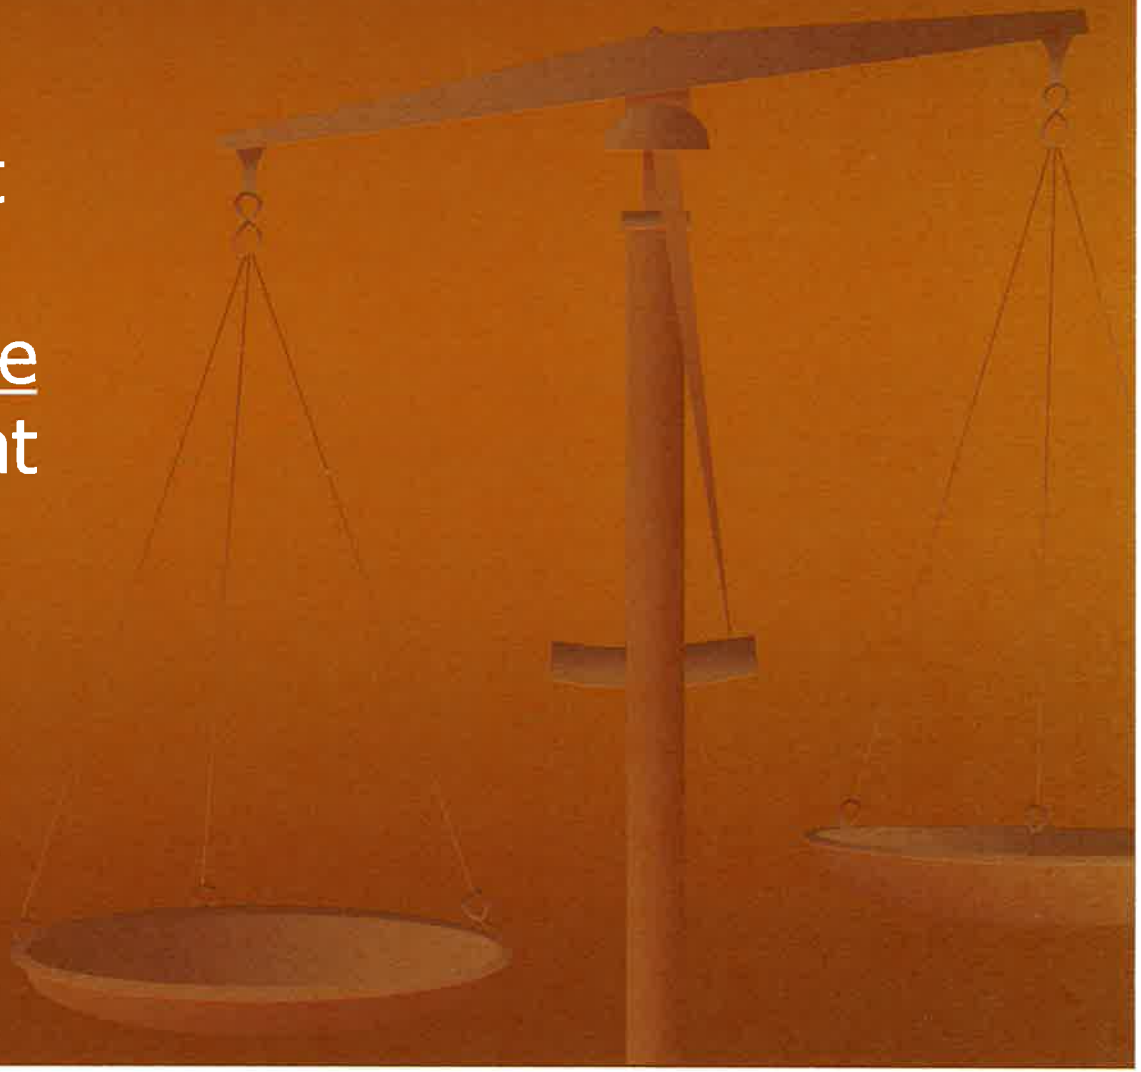
One of the early Best Management Practices (BMPs)

BMPs

. . . making the best choices about efficient and effective erosion and sediment control while balancing the other aspects of the construction project.



Take Action/Get Results

- Anticipate/manage potential erosion issues.
- Employ practical methods to reduce this potential.
- Effective erosion control eliminates the need for sediment control.

- Reduce your erosion and sediment control issues by implementing timely and appropriate BMP solutions, implemented individually, or in combination, site-specific, properly installed.

- This will significantly reduce serious and costly problems in the future.

BMP Do's

- Appropriate
- Timely
- Installation
- Monitor effectiveness of BMPs
- Maintenance of BMPs
  - Repair or replace
  - Remove built-up sediment
  - Removal of BMPs

And, just when you think you are good to go . . .
